# FIRST CAUSE FOR DISCIPLINE (Repeated Negligent Acts)

- 6. Respondent has subjected his Physician's and Surgeon's Certificate No. A113112 to disciplinary action under sections 2227 and 2234, as defined by section 2234, subdivision (c), of the Code, in that he committed repeated negligent acts in his care and treatment of Patient A, as more particularly alleged hereafter:
- 7. On or about November 16, 2013, Patient A, then a forty-five-year-old male, voluntarily admitted himself to S.D.P.H. for depression and suicidal ideations. S.D.P.H. provided inpatient adult emergency and psychiatric services. At the time, Respondent, who was an employee of S.D.P.H., would act as an internal medicine consultant for patients who also needed non-psychiatric medical attention.
- 8. On or about November 16, 2013, S.K., M.D., a psychiatrist working at S.D.P.H., did a psychiatric assessment of Patient A. Patient A, who was homeless, reported a history of bipolar

<sup>&</sup>lt;sup>1</sup> To protect the privacy of the patient, the patient's name has been omitted from this pleading. Respondent is aware of Patient A's identity.

disorder, paranoid schizophrenia, substance abuse disorder, and chronic back pain. Patient A had been experiencing suicidal thoughts with ongoing depressive symptoms. Patient A was admitted to S.D.P.H.'s Emergency Psychiatric Unit for safety, further observation, and psychiatric treatment. To address his chronic back pain, Patient A was prescribed ibuprofen.

- 9. On or about November 17, 2013, R.F., M.D., another staff physician at S.D.P.H., did a history and physical assessment of Patient A. R.F. noted that Patient A was "tired of living in pain, being homeless and [was] feeling very depressed." R.F. also observed that Patient A was "moaning and groaning" due to back pain, and used a walker to slowly walk to the exam room. Patient A told R.F. that his back problems started 20 years prior when he fell three stories while working as a carpenter. Patient A said that approximately five weeks prior, he tripped and fell at the park, and that he had severe back spasms ever since. Patient A also told R.F. that he had gone to other local hospitals three times prior for his back pain and was given pain medications, but that no x-rays had ever been ordered.
- 10. R.F. performed a physical exam on Patient A. He noted that Patient A was stiff in his mid-back, and that he had a great deal of difficulty sitting up, bending over, and straightening up. Patient A reported his pain level was "10/10" and that he had spasms up and down his mid-to lower-back. R.F. noted that Patient A's reflexes were absent at the knees and ankles, but that he did not have numbness or shooting pain in his legs. R.F.'s impressions included subacute severe mid-back pain superimposed upon a history of chronic mid-back pain from an old fall injury. He ordered x-rays of the thoracic and lumbar spines and prescribed Patient A Flexeril<sup>2</sup> and Vicodin<sup>3</sup> for severe back pain.
- 11. On or about November 18, 2013, x-rays of Patient A's spine were taken, and corresponding reports from the radiologist were sent to S.D.P.H. The impressions documented in the radiology reports included marked osteopenia,<sup>4</sup> wedge shaped compression deformities

<sup>&</sup>lt;sup>2</sup> Flexeril, brand name for cyclobenzaprine, is a muscle relaxant.

<sup>&</sup>lt;sup>3</sup> Vicodin, brand name for hydrocodone and acetaminophen, is an opiate narcotic used to treat severe pain.

involving the inferior T10 and superior T11<sup>5</sup> endplates, and a subtle dextroscoliosis<sup>6</sup> of the lower dorsal spine. The radiologist recommended a follow up CT (computerized tomography) scan of the thoracic spine for further evaluation, and for Patient A's treating providers to consider a thoracic spine MRI (magnetic resonance imaging) as a follow up study.

- 12. On or about November 18, 2013, Respondent saw Patient A for a follow up visit. Respondent had reviewed the prior history and physical assessment done by R.F. as well the radiology reports. Respondent noted that Patient A was complaining of back pain, and that his pain level was "10/10." He noted Patient A's current medications, Flexeril and Vicodin, and that Patient A was using a walker. He also referenced the x-rays and the fact that no compression fractures were noted. Respondent reviewed Patient A's vital signs and performed a physical exam. He documented that Patient A was not in acute stress, and that his back had paraspinal tenderness. He wrote that Patient A had full range of motion, full motor strength, and normal reflexes.
- 13. In a subsequent interview with Board investigators, Respondent said that he had talked to Patient A about titrating off Vicodin during this visit because Patient A wanted to go to a shelter that prohibited the use of narcotics. Respondent told Board investigators that Patient A agreed to discontinue the Vicodin. This discussion was not documented in Respondent's progress note.
- 14. Respondent's assessment of Patient A was that he had back pain and spasms with no fracture. He prescribed acetaminophen, ibuprofen, and a topical analgesic cream for pain as needed. He showed Patient A back exercises he could try to relieve the pain.
- 15. Patient A remained at S.D.P.H. until on or about November 21, 2013. S.D.P.H. records show that from the time of Respondent's examination to the time Patient A left, Patient A complained that he could not get out of bed due to his back pain, told nurses he was in severe pain, and repeatedly asked for stronger pain medication.
