

BEFORE THE  
MEDICAL BOARD OF CALIFORNIA  
DEPARTMENT OF CONSUMER AFFAIRS  
STATE OF CALIFORNIA

In the Matter of the Accusation  
Against:

Lawrence A. Price, M.D.

Case No. 800-2018-044702

Physician's and Surgeon's  
Certificate No. G15724

Respondent

DECISION

The attached Stipulated Settlement and Disciplinary Order is hereby adopted as the Decision and Order of the Medical Board of California, Department of Consumer Affairs, State of California.

This Decision shall become effective at 5:00 p.m. on

February 11, 2021.

IT IS SO ORDERED February 4, 2021.

MEDICAL BOARD OF CALIFORNIA

Case No. 800-2018-044702  
OAH No. 2020050355  
**STIPULATED SETTLEMENT AND**  
**DISCIPLINARY ORDER**

18  
19  
20 IT IS HEREBY STIPULATED AND AGREED by and between the parties to the above-  
21 entitled proceedings that the following matters are true:

22 **PARTIES**

23 1. William Prasifka (Complainant) is the Executive Director of the Medical Board of  
24 California (Board). He brought this action solely in his official capacity and is represented in this  
25 matter by Xavier Becerra, Attorney General of the State of California, by Jannsen Tan, Deputy  
26 Attorney General.

27 *///*

28

1 CULPABILITY

2 9. Respondent understands and agrees that the charges and allegations in Accusation  
3 No. 800-2018-044702, if proven at a hearing, constitute cause for imposing discipline upon his  
4 Physician's and Surgeon's Certificate.

5 10. Respondent agrees that, at a hearing, Complainant could establish a prima facie case  
6 or factual basis for the charges in the Accusation, and that Respondent hereby gives up his right  
7 to contest those charges.

8 11. Respondent does not contest that, at an administrative hearing, complainant could  
9 establish a prima facie case with respect to the charges and allegations in Accusation No. 800-  
10 2018-044702, a true and correct copy of which is attached hereto as Exhibit A, and that he has  
11 thereby subjected his Physician's and Surgeon's Certificate, No. G 15724 to disciplinary action.

12 12. Respondent agrees that his Physician's and Surgeon's Certificate is subject to  
13 discipline and he agrees to be bound by the Board's imposition of discipline as set forth in the  
14 Disciplinary Order below.

15 RESERVATION

16 13. The admissions made by Respondent herein are only for the purposes of this  
17 proceeding, or any other proceedings in which the Medical Board of California or other  
18 professional licensing agency is involved, and shall not be admissible in any other criminal or  
19 civil proceeding.

20 CONTINGENCY

21 14. This stipulation shall be subject to approval by the Medical Board of California.  
22 Respondent understands and agrees that counsel for Complainant and the staff of the Medical  
23 Board of California may communicate directly with the Board regarding this stipulation and  
24 settlement, without notice to or participation by Respondent or his counsel. By signing the  
25 stipulation, Respondent understands and agrees that he may not withdraw his agreement or seek  
26 to rescind the stipulation prior to the time the Board considers and acts upon it. If the Board fails  
27 to adopt this stipulation as its Decision and Order, the Stipulated Settlement and Disciplinary  
28 Order shall be of no force or effect, except for this paragraph, it shall be inadmissible in any legal

1 action between the parties, and the Board shall not be disqualified from further action by having  
2 considered this matter.

3 15. The parties understand and agree that Portable Document Format (PDF) and facsimile  
4 copies of this Stipulated Settlement and Disciplinary Order, including PDF and facsimile  
5 signatures thereto, shall have the same force and effect as the originals.

6 16. In consideration of the foregoing admissions and stipulations, the parties agree that  
7 the Board may, without further notice or opportunity to be heard by the Respondent, issue and  
8 enter the following Disciplinary Order:

9 **DISCIPLINARY ORDER**

10 IT IS HEREBY ORDERED that Physician's and Surgeon's Certificate No. G 15724 issued  
11 to Respondent Lawrence A. Price, M.D. is surrendered and accepted by the Board.

12 1. The surrender of Respondent's Physician's and Surgeon's Certificate and the  
13 acceptance of the surrendered license by the Board shall constitute the imposition of discipline  
14 against Respondent. This stipulation constitutes a record of the discipline and shall become a part  
15 of Respondent's license history with the Board.

16 2. Respondent shall lose all rights and privileges as a Physician and Surgeon in  
17 California as of the effective date of the Board's Decision and Order.

18 3. Respondent shall cause to be delivered to the Board his pocket license and, if one was  
19 issued, his wall certificate on or before the effective date of the Decision and Order.

20 4. If Respondent ever files an application for licensure or a petition for reinstatement in  
21 the State of California, the Board shall treat it as a petition for reinstatement. Respondent must  
22 comply with all the laws, regulations and procedures for reinstatement of a revoked or  
23 surrendered license in effect at the time the petition is filed, and all of the charges and allegations  
24 contained in Accusation No. 800-2018-044702 shall be deemed to be true, correct and admitted  
25 by Respondent when the Board determines whether to grant or deny the petition.

26 5. If Respondent should ever apply or reapply for a new license or certification, or  
27 petition for reinstatement of a license, by any other health care licensing agency in the State of  
28 California, all of the charges and allegations contained in Accusation, No. 800-2018-044702 shall

1 be deemed to be true, correct, and admitted by Respondent for the purpose of any Statement of  
2 Issues or any other proceeding seeking to deny or restrict licensure.

3 ACCEPTANCE

4 I have carefully read the above Stipulated Settlement and Disciplinary Order and have fully  
5 discussed it with my attorney, Dominique A. Pollara. I understand the stipulation and the effect it  
6 will have on my Physician's and Surgeon's Certificate. I enter into this Stipulated Settlement and  
7 Disciplinary Order voluntarily, knowingly, and intelligently, and agree to be bound by the  
8 Decision and Order of the Medical Board of California.

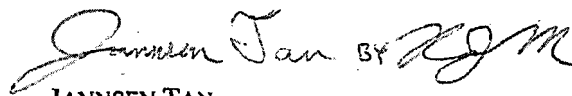

9  
10 DATED: 12/2/2020   
11 LAWRENCE A. PRICE, M.D.  
12 Respondent

13 I have read and fully discussed with Respondent Lawrence A. Price, M.D. the terms and  
14 conditions and other matters contained in the above Stipulated Settlement and Disciplinary Order.

15 I approve its form and content.  
16 DATED: 12/2/2020   
17 DOMINIQUE A. POLLARA  
18 Attorney for Respondent

19 ENDORSEMENT

20 The foregoing Stipulated Settlement and Disciplinary Order is hereby respectfully  
21 submitted for consideration by the Medical Board of California.

22 DATED: 12/2/2020  
23 Respectfully submitted,  
24 XAVIER BECERRA

“(d) Incompetence.

“(e) The commission of any act involving dishonesty or corruption which is substantially related to the qualifications, functions, or duties of a physician and surgeon.

“(f) Any action or conduct which would have warranted the denial of a certificate.

“...”

6. Section 2266 of the Code states:

“The failure of a physician and surgeon to maintain adequate and accurate records relating to the provision of services to their patients constitutes unprofessional conduct.”

7. Section 4021 of the Code states:

“ ‘Controlled substance’ means any substance listed in Chapter 2 (commencing with Section 11053) of Division 10 of the Health and Safety Code.”

8. Section 4022 of the Code states:

“ ‘Dangerous drug’ or ‘dangerous device’ means any drug or device unsafe for self-use, in humans or animals, and includes the following:

“(a) Any drug that bears the legend: ‘Caution: federal law prohibits dispensing without prescription,’ ‘Rx only,’ or words of similar import.

“(b) Any device that bears the statement: ‘Caution: federal law restricts this device to sale by or on the order of a \_\_\_\_\_,’ ‘Rx only,’ or words of similar import, the blank to be filled in with the designation of the practitioner licensed to use or order use of the device.

“(c) Any other drug or device that by federal or state law can be lawfully dispensed only on prescription or furnished pursuant to Section 4006.”

///  
///  
///

1 DEFINITIONS

2 9. **Alprazolam** (generic name for the drug Xanax) is a short-acting benzodiazepine used  
3 to treat anxiety, and is a Schedule IV controlled substance pursuant to Code of Federal  
4 Regulations Title 21 section 1308.14. Alprazolam is a dangerous drug pursuant to California  
5 Business and Professions Code section 4022 and is a Schedule IV controlled substance pursuant  
6 to California Health and Safety Code section 11057, subdivision (d).

7 10. **Carisoprodol** (generic name for the drug Soma) is a centrally acting skeletal muscle  
8 relaxant. On January 11, 2012, carisoprodol was classified a Schedule IV controlled substance  
9 pursuant to Code of Federal Regulations Title 21 section 1308.14(c). It is a dangerous drug  
10 pursuant to Business and Professions Code section 4022.

11 11. **Cyclobenzaprine** (generic name for Flexeril) is a centrally acting skeletal muscle  
12 relaxant. Cyclobenzaprine may have drug interactions with central nervous system depressants.  
13 It is a dangerous drug pursuant to Business and Professions Code section 4022.

14 12. **Diazepam** (generic name for the drug Valium) is a benzodiazepine drug used to treat  
15 a wide range of conditions, including anxiety, panic attacks, insomnia, seizures (including status  
16 epilepticus), muscle spasms (such as in tetanus cases), restless legs syndrome, alcohol  
17 withdrawal, benzodiazepine withdrawal, opiate withdrawal syndrome and Meniere's disease. It is  
18 a Schedule IV controlled substance pursuant to California Health and Safety Code section 11057,  
19 subdivision (d), and a dangerous drug pursuant to Business and Professions Code section 4022.

20 13. **Fentanyl** (generic name for the drug Duragesic) is a potent, synthetic opioid  
21 analgesic with a rapid onset and short duration of action used for pain. The fentanyl transdermal  
22 patch is used for long term chronic pain. It has an extremely high danger of abuse and can lead to  
23 addiction as the medication is estimated to be 80 times more potent than morphine and hundreds  
24 of times more potent than heroin.<sup>1</sup> Fentanyl is a Schedule II controlled substance pursuant to  
25 Code of Federal Regulations Title 21 section 1308.12. Fentanyl is a dangerous drug pursuant to  
26 California Business and Professions Code section 4022 and is a Schedule II controlled substance  
27 pursuant to California Health and Safety Code section 11055, subdivision (c).

28 <sup>1</sup> [http://www.cdc.gov/niosh/ersbdb/EmergencyResponseCard\\_29750022.html](http://www.cdc.gov/niosh/ersbdb/EmergencyResponseCard_29750022.html)

1           14.   **Hydrocodone bitartrate with acetaminophen** (generic name for the drugs Vicodin,  
2 Norco, and Lortab) is an opioid analgesic combination product used to treat moderate to  
3 moderately severe pain. Prior to October 6, 2014, hydrocodone with acetaminophen was a  
4 Schedule III controlled substance pursuant to Code of Federal Regulations Title 21 section  
5 1308.13(e). On October 6, 2014, hydrocodone combination products were reclassified as  
6 Schedule II controlled substances. Hydrocodone with acetaminophen is a dangerous drug  
7 pursuant to California Business and Professions Code section 4022 and is a Schedule II controlled  
8 substance pursuant to California Health and Safety Code section 11055, subdivision (b).

9           15.   **Hydromorphone hydrochloride** (generic name for the drug Dilaudid) is a potent  
10 opioid agonist that has a high potential for abuse and risk of producing respiratory depression.  
11 Hydromorphone hcl is a short-acting medication used to treat severe pain. Hydromorphone hcl is  
12 a Schedule II controlled substance pursuant to Code of Federal Regulations Title 21 section  
13 1308.12. Hydromorphone hcl is a dangerous drug pursuant to California Business and  
14 Professions Code section 4022 and is a Schedule II controlled substance pursuant to California  
15 Health and Safety Code section 11055, subdivision (b).

16           16.   **Lorazepam** (generic name for Ativan) is a member of the benzodiazepine family and  
17 is a fast-acting anti-anxiety medication used for the short-term management of severe anxiety.  
18 Lorazepam is a Schedule IV controlled substance pursuant to Code of Federal Regulations Title  
19 21 section 1308.14(c) and California Health and Safety Code section 11057, subdivision (d), and  
20 a dangerous drug pursuant to Business and Professions Code section 4022.

21           17.   **Methadone** (generic name for the drug Symoron) is a synthetic opioid. It is used  
22 medically as an analgesic and a maintenance anti-addictive and reductive preparation for use by  
23 patients with opioid dependence. Methadone is a Schedule II controlled substance pursuant to  
24 Code of Federal Regulations Title 21 section 1308.12. It is a Schedule II controlled substance  
25 pursuant to California Health and Safety Code 11055, subdivision (c), and a dangerous drug  
26 pursuant to Business and Professions Code section 4022.

27           18.   **Morphine sulfate** (generic name for the drugs Kadian, MS Contin, and MorphaBond  
28 ER) is an opioid analgesic drug. It is the main psychoactive chemical in opium. Like other

1 opioids, such as oxycodone, hydromorphone, and heroin, morphine acts directly on the central  
2 nervous system (CNS) to relieve pain. Morphine sulfate dissolves readily in water and body  
3 fluids, creating an immediate release. Morphine is a Schedule II controlled substance pursuant to  
4 Code of Federal Regulations Title 21 section 1308.12. Morphine is a Schedule II controlled  
5 substance pursuant to California Health and Safety Code 11055, subdivision (b), and a dangerous  
6 drug pursuant to Business and Professions Code section 4022.

7 19. **Oxycodone** (generic name for Oxycontin, Roxicodone, and Oxecta) is a short acting  
8 opioid analgesic used to treat moderate to severe pain. It is a high risk drug for addiction and  
9 dependence. It can cause respiratory distress and death when taken in high doses or when  
10 combined with other substances, especially alcohol. Oxycodone is a Schedule II controlled  
11 substance pursuant to Code of Federal Regulations Title 21 section 1308.12. Oxycodone is a  
12 dangerous drug pursuant to California Business and Professions Code section 4022 and is a  
13 Schedule II controlled substance pursuant to California Health and Safety Code section 11055,  
14 subdivision (b).

15 20. **Oxycodone and acetaminophen** (generic name for Endocet and Percocet) is an  
16 opioid analgesic combination product used to treat moderate to severe pain. Oxycodone and  
17 acetaminophen is a dangerous drug pursuant to California Business and Professions Code section  
18 4022 and is a Schedule II controlled substance pursuant to California Health and Safety Code  
19 section 11055, subdivision (b).

20 21. **Zolpidem tartrate** (generic name for Ambien): is a sedative and hypnotic used for  
21 short term treatment of insomnia. Zolpidem tartrate is a Schedule IV controlled substance  
22 pursuant to Code of Federal Regulations Title 21 section 1308.14(c). It is a Schedule IV  
23 controlled substance pursuant to Health and Safety Code section 11057, subdivision (d), and a  
24 dangerous drug pursuant to Business and Professions Code section 4022.

27 ///

28 ///

1 **FIRST CAUSE FOR DISCIPLINE**

2 **(Repeated Negligent Acts)**

3 22. Respondent's license is subject to disciplinary action under section 2234, subdivision  
4 (c), of the Code, in that he committed repeated negligent acts during the care and treatment of  
5 Patients A, B, C, and D.<sup>2</sup> The circumstances are as follows:

6 23. Respondent is a physician and surgeon, board certified in internal medicine, who at  
7 all times relevant to the charges brought herein worked under the Plumas District Hospital –  
8 Rural Health Center in Quincy, California.

9 Patient A

10 24. Patient A is a 56-year old male who first sought treatment from Respondent in 1996.  
11 Patient A continued to see Respondent as a primary care physician and for regular and ongoing  
12 pain management. Patient A's diagnoses included: lumbosacral spondylosis with radiculopathy  
13 of L5 and S1 nerve roots, spinal stenosis at L4-5 lateral recess stenosis L4-5, right foot crush  
14 injury, degenerative joint disease, other chronic pain and major depressive disorder, recurrent,  
15 moderate. Patient A had a history of multiple back surgeries.

16 25. Available patient records indicate that Respondent treated Patient A for pain  
17 management from at least 2012 through 2018. Throughout this time, Respondent prescribed very  
18 high dosages of opioids in combination with sedatives. Respondent would typically see Patient A  
19 every one to three months for medication refills.

20 26. For example, on or around January 7, 2016, Respondent saw Patient A for a chief  
21 complaint of "med refill." The examination states, "No change in chronic low back or neck pain.  
22 No long track signs." The assessment states, "Other chronic pain, and Major depressive disorder,  
23 recurrent, moderate." Respondent documented the current medications as: diphenhydramine 50  
24 mg daily; sertraline 50 mg daily; gemfibrozil 600 mg twice a day; Oxycontin 60 mg every 8  
25 hours; Endocet 5/325 mg every 6 hours; and lorazepam 2 mg daily. The daily morphine

26 ///

27 ///

28 <sup>2</sup> Patient names are redacted to protect privacy.

1 milligram equivalent (MME) for these prescriptions was 300 mg.<sup>3</sup> Respondent refilled the  
2 prescriptions for Oxycontin and Endocet.

3 27. Similarly, on or around June 4, 2018, Respondent saw Patient A for a chief complaint  
4 of "med refill." The current medications documented by Respondent included Endocet 5/325 mg  
5 twice a day; Oxycontin 40 mg every 8 hours, lorazepam 1 mg twice a day, cyclobenzaprine 10  
6 mg 3 times a day. The MME for these prescriptions was 195 mg. Respondent refilled Patient  
7 A's prescriptions.

8 28. From on or about March 5, 2013, through November 25, 2013, Respondent saw  
9 Patient A approximately 9 times for pain management or "med refills." For the 2013 calendar  
10 year, Respondent wrote Patient A: 11 prescriptions for Oxycontin 60 mg for a total of 990 tablets;  
11 11 prescriptions for oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of 1,320 tablets; and  
12 11 prescriptions for lorazepam 2 mg for a total of 990 tablets.

13 29. From on or about January 6, 2014, through December 8, 2014, Respondent saw  
14 Patient A approximately 10 times for pain management or "med refills." For the 2014 calendar  
15 year, Respondent wrote Patient A: 10 prescriptions for Oxycontin 60 mg for a total of 900 tablets;  
16 10 prescriptions for oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of 1,110 tablets; and  
17 12 prescriptions for lorazepam 2 mg for a total of 1,020 tablets.

18 30. From on or about January 6, 2015, through December 10, 2015, Respondent saw  
19 Patient A approximately 12 times for pain management or "med refills." For the 2015 calendar  
20 year, Respondent wrote Patient A: 14 prescriptions for Oxycontin 60 mg for a total of 1,179  
21 tablets; 1 prescription for 18 tablets of Oxycontin 30 mg; 13 prescriptions for oxycodone hcl-  
22 acetaminophen 325 mg – 5 mg for a total of 960 tablets; and 12 prescriptions for lorazepam 2 mg  
23 for a total of 630 tablets.

24 31. From on or about January 7, 2016, through October 17, 2016, Respondent saw Patient  
25 A approximately 9 times for pain management or "med refills." For the 2016 calendar year,

26 <sup>3</sup> The Centers for Disease Control and Prevention (CDC) recommends that clinicians  
27 avoid increasing prescribed opiates beyond 90 MME per day. Doses above 50 MME per day  
28 confer an increased risk of overdose of at least twice that of a dose less than 20 MME per day.  
The CDC states that higher dosages have not been shown to reduce pain over the long-term and  
that higher opioid dosages place the patient at higher risk of overdose death.

1 Respondent wrote Patient A: 13 prescriptions for Oxycontin 60 mg for a total of 1,177 tablets; 13  
2 prescriptions for oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of 810 tablets; 7  
3 prescriptions for lorazepam 2 mg for a total of 260 tablets; and 6 prescriptions for lorazepam 1  
4 mg for a total of 360 tablets. During this time, he would often meet with Patient A and give him  
5 prescriptions for sequential months.

6 32. From on or about January 11, 2017, through October 2, 2017, Respondent saw Patient  
7 A approximately 4 times for pain management or “med refills.” For the 2017 calendar year,  
8 Respondent wrote Patient A: 12 prescriptions for Oxycontin 60 mg for a total of 1,113 tablets; 12  
9 prescriptions for oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of 720 tablets; and 12  
10 prescriptions for lorazepam 1 mg for a total of 720 tablets. During this time, he would meet with  
11 Patient A quarterly and give him prescriptions for three sequential months.

12 33. From on or about January 17, 2018, through June 4, 2018, Respondent saw Patient A  
13 approximately 3 times for pain management or “med refills.” For the first five months of 2018,  
14 Respondent wrote Patient A: 5 prescriptions for Oxycontin 40 mg for a total of 413 tablets; 5  
15 prescriptions for oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of 240 tablets; and 5  
16 prescriptions for lorazepam 1 mg for a total of 300 tablets. During this time, he would meet with  
17 Patient A and give him prescriptions for sequential months.

18 34. Throughout the relevant period, Respondent’s visit summaries for Patient A indicate  
19 that he would consume 1-2 alcoholic drinks per day. Indeed, on or around March 12, 2018, in  
20 response to an Annual Drug and Alcohol (SBIRT) and Depression Screening, Patient A stated  
21 that he would drink daily. When asked how many times in the past year he had 5 or more drinks  
22 in one day, Patient A checked the box for “1 or more.” When asked how many times in the past  
23 year he had used a recreational drug or used a prescription medication for nonmedical reasons,  
24 Patient A checked the box for “1 or more.” The questionnaire did not provide a box for greater  
25 frequency of alcohol or drug use.

26 35. In addition, Respondent rarely ordered toxicology screens for Patient A. It appears  
27 that Respondent ordered only one toxicology screen for Patient A from 2012 to 2018, which  
28 showed a positive result for alcohol.

1           36. Despite Respondent's regular drinking habits—which are chronicled in the visit  
2 summaries, drug and alcohol survey, and toxicology screen—Respondent did not document any  
3 discussions with Patient A regarding the risk of drinking alcohol while taking controlled  
4 substances. Further, during an interview with Board investigators on April 11, 2019, Respondent  
5 admitted that he did not assess Patient A (or his patients generally) for addiction risk.

6           37. During the relevant time, Respondent did not have a signed pain management  
7 contract with Patient A. This was apparently brought to Respondent's attention—who noted it in  
8 an April 30, 2015 visit summary—but it appears that Respondent and Patient A did not execute  
9 an agreement until January 2019, well after the Board began investigating and collecting  
10 documents from Respondent.

11           38. During Respondent's care and treatment of Patient A, he failed to refer Patient A to a  
12 pain management specialist. Respondent also failed to discuss the health and overdose risks of  
13 taking high-dose opioids in combination with a benzodiazepine.

14           39. Respondent's care and treatment of Patient A departed from the standard of care in  
15 that:

- 16           A. Respondent prescribed very high dosages of opioids—that far exceeded the 90 MME  
17 threshold recommended by the CDC—in combination with a benzodiazepine;
- 18           B. Respondent failed to perform periodic urine toxicology screens during chronic opioid  
19 therapy;
- 20           C. Respondent failed to check the CURES database;
- 21           D. Respondent failed to have a pain management agreement in place with Patient A; and
- 22           E. Respondent failed to create a long-term pain management plan and/or evaluate the  
23 value of continuing high-dose opioids for Patient A.

24           Patient B

25           40. Patient B is a deceased male who first sought treatment from Respondent on or about  
26 January 18, 2012, when Patient B was 61 years old. Respondent treated Patient B from 2012 to  
27 2016. Patient B's diagnoses included: cervical spinal stenosis, kyphosis, depression, cervical  
28 spondylosis and myelopathy, and chronic pain syndrome.

1           41. During their first visit in January 2012, Patient B reported to Respondent that his  
2 then-current pain medications included only 5 tablets per day of Norco (hydrocodone bitartrate  
3 with acetaminophen) 7.5 mg – 750 mg. Over the next several months and years, Respondent (and  
4 a physician assistant under his supervision) drastically increased the amount of opioids prescribed  
5 to Patient B. Respondent made (or allowed) these changes typically without any documented  
6 rationale. Respondent also added alprazolam, a benzodiazepine, to Patient B's prescriptions. By  
7 August 2013, Respondent was prescribing a monthly regimen that included: 135 tablets of  
8 oxycodone hcl-acetaminophen 325 mg – 5 mg; 90 tablets of morphine sulfate 60 mg; and 90  
9 tablets of alprazolam 0.5 mg.

10           42. Respondent continued to treat Patient B for pain management through July 2016, a  
11 few weeks prior to Patient B's death. Throughout this time, Respondent prescribed very high  
12 dosages of opioids in combination with sedatives such as benzodiazepines. Although there were  
13 periods when midlevel's under Respondent's supervision would see Patient B, Respondent would  
14 typically see Patient B every one to four months for medication refills.

15           43. For example, on or around September 9, 2014, Respondent saw Patient B at the  
16 Plumas District Hospital as an outpatient for a chief complaint of "med refill." Patient B's pain  
17 index was 8. Respondent documented the current medications as: gabapentin 3 mg 3 times a day;  
18 alprazolam 0.5 mg 4 times a day; diazepam 10 mg twice a day; and oxycodone 30 mg every 4  
19 hours. Respondent noted that Patient B "returns after 2 weeks. He is getting pain coverage with  
20 the oxycodone 30 mg taking up to 8 tablets daily with permission to take 2 at a time at times.  
21 This totals 112 tablets for 2 weeks. He had significant depressive symptoms last visit despite  
22 sertraline 50 mg daily for a few months. We have increased him to 100 mg. He does not feel any  
23 clear difference." The visit summary also states that Patient B "drinks wine" and "reports regular  
24 alcohol use." The assessment/plan was "depression and chronic pain syndrome." Respondent  
25 renewed the oxycodone prescription for 112 tablets of the 30 mg dosage.

26           44. Following the meeting on September 9, 2014, described above, Respondent continued  
27 to see Patient B regularly for pain management over the next few months. On or around March  
28 24, 2015, however, Patient B went to Dr. J.S., a doctor of osteopathic medicine in the same

1 hospital as Respondent, for pain management while Respondent was away. Dr. J.S. expressed  
2 great concern in his visit summary about the medication regimen that Patient B had been  
3 receiving from Respondent. In particular, Dr. J.S. noted, "I am concerned about [Patient B's]  
4 cognition. His thinking is slow perseverative and basically focused on getting a higher dose of  
5 medication. . . . His speech pattern suggests either hypothyroidism or benzo effect to me, the  
6 latter being more likely." For the plan, Dr. J.S. wrote:

7 "#1 chronic pain secondary to stenosis and severe scoliosis. No focal neurologic  
8 deficits. Patient is on 500-600 morphine equivalence in a 24-hour period. Discussed  
9 for 45 minutes to an hour his need to reduce his morphine equivalence do [sic] his  
10 risk for respiratory suppression. Patient is also on benzodiazepine which increases  
11 that risk even more. Patient likely does have chronic pain and will need to visit  
12 multifactorial treatment plan that would include a lessening his opiates. Likely a  
13 component of hyper aesthesias secondary to opiate use. At this time I will decrease  
14 his opiates by 20% every month."

15 45. On or around April 8, 2015, Dr. J.S. saw Patient B for a second time. He noted that  
16 in the previous month Patient B took 4 tablets per day of morphine sulfate 100 mg and two tablets  
17 per day of Dilaudid 4 mg. For the treatment plan, Dr. J.S. stated, "Today's reduction will be no  
18 Dilaudid. We'll refill morphine with plans to decrease by 20% next month." Dr. J.S. further  
19 noted that Patient B was "resistant to the plan" and that there was "some confusion on [the] last  
20 plan." Specifically, Patient B "thought he was to continue taking his current dose of medication  
21 after explaining to him for an hour and a half our plan for reduction. Will start his withdrawal  
22 plan today with a 20% reduction every month to every 2 months to help with severe withdrawals  
23 given his age."

24 46. On or around May 5, 2015, Patient B returned to Respondent with a chief complaint  
25 of "med refills." Respondent noted that Patient B "[r]eturns after a month he saw Dr. [J.S.] for  
26 several visits" and that "his Dilaudid was stopped so he has been taking a great deal of ibuprofen  
27 and having a lot of pain. Mention was made of a referral to a pain specialist but he hasn't heard  
28 anything." Respondent renewed the prescription for Dilaudid (hydromorphone hcl)—which Dr.  
J.S. had discontinued—without stating the rationale. Respondent also refilled Patient B's  
prescriptions for alprazolam and morphine sulfate. Respondent did not reduce the amount or  
dosage of morphine sulfate, despite Dr. J.S.'s written plan to do so.

1 47. On or around May 18, 2015, Patient B's ex-fiancé spoke to hospital staff to inform  
2 Respondent that Patient B had been "drinking excessively and falling down as well." The  
3 hospital staff made the following note: "MD is made aware."<sup>4</sup>

4 48. On or around June 2, 2015, Respondent saw Patient B and again refilled the same  
5 prescription dosages and amounts for morphine sulfate, Dilaudid, and alprazolam. Respondent  
6 did not document a discussion concerning the report of excessive drinking and falling down. Nor  
7 did Respondent document a discussion regarding the use of alcohol with controlled substances.  
8 Respondent continued to see Patient B and provide similar prescriptions until approximately July  
9 13, 2016.

10 49. From on or about April 11, 2013, through December 18, 2013, Respondent saw  
11 Patient B approximately 7 times for pain management or "med refills." For the 2013 calendar  
12 year, Respondent wrote Patient B: 8 prescriptions for hydrocodone bitartrate-acetaminophen 500  
13 mg – 10 mg for a total of 960 tablets; 1 prescription for 120 tablets of hydrocodone bitartrate-  
14 acetaminophen 325 mg – 10 mg; 5 prescriptions for oxycodone hcl-acetaminophen 325 mg – 10  
15 mg for a total of 780 tablets; 1 prescription for 135 tablets of oxycodone hcl-acetaminophen 325  
16 mg – 5 mg; 2 prescriptions for morphine sulfate 60 mg for a total of 180 tablets; 1 prescription for  
17 90 tablets of morphine sulfate 100 mg; and 1 prescription for 186 tablets of methadone hcl 10 mg.

18 50. In addition, during the last 7 months of 2013, a physician assistant under  
19 Respondent's supervision also wrote Patient B: 4 prescriptions for morphine sulfate 100 mg for a  
20 total of 360 tablets; 1 prescription for 90 tablets of morphine sulfate 60 mg; 3 prescriptions for  
21 oxycodone hcl-acetaminophen 325 mg – 10 mg for a total of 420 tablets; 2 prescriptions for  
22 oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of 135 tablets; 1 prescription for 42  
23 tablets of methadone hcl 10 mg; 1 prescription for 90 tablets of alprazolam 0.5 mg; and 1  
24 prescription for 60 tablets of alprazolam 0.25 mg.

25 51. From on or about January 14, 2014, through December 15, 2014, Respondent saw  
26 Patient B approximately 12 times for pain management or "med refills." For the 2014 calendar  
27 year, Respondent wrote Patient B: 15 prescriptions for oxycodone hcl 30 mg for a total of 1,538

28 <sup>4</sup> Patient B's fiancé raised similar concerns in 2013.

1 tablets; 9 prescriptions for alprazolam 0.5 mg for a total of 990 tablets; 8 prescriptions for  
2 diazepam 10 mg for a total of 484 tablets; 1 prescription for 248 tablets of methadone hcl; 1  
3 prescription for 180 tablets of hydrocodone bitartrate-acetaminophen 325 mg – 10 mg; and 1  
4 prescription for 60 tablets of morphine sulfate 100 mg.

5 52. In addition, during the 2014 calendar year, a physician assistant under Respondent's  
6 supervision also wrote Patient B: 6 prescriptions for oxycodone hcl 15 mg for a total of 624  
7 tablets; 3 prescriptions for oxycodone hcl 30 mg for a total of 280 tablets; 2 prescriptions for  
8 alprazolam 0.5 mg for a total of 240 tablets; 2 prescriptions for diazepam 10 mg for a total of 120  
9 tablets; and 1 prescription for 10 fentanyl patches 75 mcg/hour.

10 53. From on or about January 13, 2015, through October 20, 2015, Respondent saw  
11 Patient B approximately 7 times for pain management or "med refills." For the 2015 calendar  
12 year, Respondent wrote Patient B: 11 prescriptions for hydromorphone hcl 4 mg for a total of  
13 1,290 tablets; 9 prescriptions for morphine sulfate 100 mg for a total of 990 tablets; 9  
14 prescriptions for alprazolam 0.5 mg for a total of 1,080 tablets; and 1 prescription for 90 tablets of  
15 oxycodone hcl 30 mg.

16 54. From on or about January 7, 2016, through July 13, 2016, Respondent saw Patient B  
17 approximately 3 times for pain management or "med refills." During that time, Respondent  
18 wrote Patient B: 7 prescriptions for hydromorphone hcl 4 mg for a total of 1,050 tablets; 7  
19 prescriptions for morphine sulfate 100 mg for a total of 840 tablets; and 7 prescriptions for  
20 alprazolam 0.5 mg for a total of 1,050 tablets.

21 55. During his treatment of Patient B, Respondent failed to refer him to a pain  
22 management specialist.

23 56. Respondent's care and treatment of Patient B departed from the standard of care in  
24 that:

25 A. Respondent prescribed very high dosages of opioids—that far exceeded the 90 MME  
26 threshold recommended by the CDC—in combination with benzodiazepines;

27 B. Respondent checked the CURES database only twice near the beginning of treating  
28 Patient B for 3-4 years;

1 C. Respondent failed to discuss the overdose risks of taking high-dose opioids in  
2 combination with large amounts of sedatives and steady alcohol use;

3 D. Respondent failed to discuss the risks of addiction associated with taking high-dose  
4 opioids in combination with sedatives;

5 E. Respondent failed to have a pain management agreement in place with Patient B; and

6 F. Respondent failed to create a long-term pain management plan.

7 Patient C

8 57. Patient C is a 59-year old female who has received treatment from Respondent since  
9 at least 2003. Available patient records indicate that Respondent treated Patient C on a regular  
10 basis for pain management from at least 2015 through 2018, and intermittently for a few years  
11 before then. Her diagnoses included chronic pain syndrome, low back pain, insomnia, hepatitis  
12 C, recurrent deep vein thrombosis, and migraine headaches. Patient C had a history of failed back  
13 surgery that resulted in a CSF leak.

14 58. From at least 2015 through 2018, Respondent prescribed very high dosages of opioids  
15 in combination with sedatives to Patient C. Respondent would typically see Patient C every one  
16 to three months for medication refills.

17 59. For example, on or around March 7, 2016, Respondent saw Patient C for a  
18 medication refill. The "current medications" for opioid and sedative medications were  
19 documented as: promethazine 12.5 mg every 6 hours, Dilaudid 8 mg every 4 hours, morphine  
20 sulfate IR 30 mg 2 tablets every 4 hours, Soma 350 mg 3 times a day, zolpidem 10 mg 1 tablet  
21 each bedtime, and diazepam 10 mg twice a day. Respondent noted, "She is now almost 56. She is  
22 tolerating her current doses but we reviewed the fact that if she gets a few years older we will  
23 need to be reducing her dosing due to age effects. Medications have been effective in controlling  
24 pain in combination with other modalities. Treatment is enabling the patient to engage in  
25 activities of daily living that would otherwise be impossible. The patient's affect has not been  
26 changed by the medication."

27 60. The above prescription regimen has an MME of 550 mg daily. In addition,  
28 Respondent prescribed opioids (hydromorphone hcl and morphine sulfate) in combination with a

1 benzodiazepine (diazepam) and a muscle relaxant (Soma), which is a highly addictive and  
2 dangerous mix also called the "Holy Trinity."

3 61. Pharmacy records from a visit with Respondent in May 2018 show prescriptions for  
4 30 tablets of diazepam 5 mg, 93 tablets of Dilaudid 8 mg, 90 tablets of Soma 350 mg, 333 tablets  
5 of morphine sulfate 30 mg immediate release. This combination again fits the "Holy Trinity"  
6 label. Respondent prescribed similar regimens dating back to at least 2015.

7 62. From on or about February 26, 2015, through December 14, 2015, Respondent saw  
8 Patient C approximately 5 times for pain management or "med refills." For the 2015 calendar  
9 year, Respondent wrote Patient C: 19 prescriptions for morphine sulfate 30 mg for a total of 3,360  
10 tablets; 10 prescriptions for Dilaudid 8 mg for a total of 915 tablets; 10 prescriptions for diazepam  
11 10 mg for a total of 690 tablets; 9 prescriptions for carisoprodol 350 mg for a total of 810 tablets;  
12 and 7 prescriptions for zolpidem tartrate 10 mg for a total of 210 tablets.

13 63. From on or about March 7, 2016, through October 25, 2016, Respondent saw Patient  
14 C approximately 7 times for pain management or "med refills." For the 2016 calendar year,  
15 Respondent wrote Patient C: 20 prescriptions for morphine sulfate 30 mg for a total of 3,480  
16 tablets; 11 prescriptions for carisoprodol 350 mg for a total of 990 tablets; 10 prescriptions for  
17 Dilaudid 8 mg for a total of 900 tablets; 5 prescriptions for zolpidem tartrate 10 mg for a total of  
18 330 tablets; and 4 prescriptions for diazepam 10 mg for a total of 480 tablets.

19 64. From on or about January 16, 2017, through November 29, 2017, Respondent saw  
20 Patient C approximately 5 times for pain management or "med refills." For the 2017 calendar  
21 year, Respondent wrote Patient C: 24 prescriptions for morphine sulfate 30 mg for a total of 3,969  
22 tablets; 12 prescriptions for carisoprodol 350 mg for a total of 1,080 tablets; 7 prescriptions for  
23 hydromorphone hcl 8 mg for a total of 639 tablets; 5 prescriptions for Dilaudid 8 mg for a total of  
24 450 tablets; 3 prescriptions for zolpidem tartrate 10 mg for a total of 270 tablets; and 3  
25 prescriptions for diazepam 5 mg for a total of 390 tablets.

26 65. From on or about February 7, 2018, through July 9, 2018, Respondent saw Patient C  
27 approximately 4 times for pain management or "med refills." For the first 5 months of 2018,  
28 Respondent wrote Patient C: 8 prescriptions for morphine sulfate 30 mg for a total of 1,572

1 tablets; 6 prescriptions for hydromorphone hcl 8 mg for a total of 558 tablets; 5 prescriptions for  
2 carisoprodol 350 mg for a total of 450 tablets; 5 prescriptions for diazepam 5 mg for a total of 150  
3 tablets; 3 prescriptions for Belsomra 10 mg for a total of 90 tablets; and 2 prescriptions for  
4 zolpidem tartrate 10 mg for a total of 180 tablets.

5 66. From 2015 to 2018, Respondent did not order any toxicology screens. An earlier  
6 toxicology screen from November 2014 was positive for methadone, which was inconsistent with  
7 Patient C's prescriptions.

8 67. Patient C signed one pain management contract in April 2015.

9 68. During Respondent's care and treatment of Patient C, he failed to refer Patient C to a  
10 pain management specialist.

11 69. Respondent's care and treatment of Patient C departed from the standard of care in  
12 that:

13 A. Respondent prescribed very high dosages of opioids—that far exceeded the 90 MME  
14 threshold recommended by the CDC—in combination with a benzodiazepine and a muscle  
15 relaxant;

16 B. Respondent failed to perform periodic urine toxicology screens during chronic opioid  
17 therapy;

18 C. Respondent failed to check the CURES database; and

19 D. Respondent failed to discuss the overdose risks of taking high-dose opioids in  
20 combination with large amounts of sedatives.

21 Patient D

22 70. Patient D is a 64-year old female who began seeing Respondent for treatment in or  
23 around 1995. Patient D's diagnoses included chronic pain syndrome (apparently due to low back  
24 pain) and COPD. She had a history of spinal stenosis and degenerative disc disease.

25 71. Available patient records indicate that Respondent treated Patient D for pain  
26 management since at least 2004. Respondent saw Patient D intermittently from 2013 to 2015,  
27 and regularly from 2016 through at least 2018. Throughout this time, Respondent prescribed very  
28

1 high dosages of opioids in combination with sedatives to Patient D. From 2016-2018,  
2 Respondent would typically see Patient D every one to three months for medication refills.

3 72. For example, on or around February 21, 2017, Respondent saw Patient D for a  
4 medication refill. The "current medications" for opioid and sedative medications were  
5 documented as: cyclobenzaprine 10 mg 3 times a day; diazepam 5 mg twice a day; Endocet 5/325  
6 mg every 6 hours; and morphine sulfate ER 60 mg every 8 hours. Respondent noted that Patient  
7 D's "[p]ain control was fair to good on current medications" and that she "had a fall last night  
8 while getting up during the night, falling onto her back." Respondent refilled Patient D's opiate  
9 prescriptions and changed her prescription for cyclobenzaprine to Soma, another muscle relaxant.

10 73. The above prescription regimen far exceeds the daily MME thresholds recommended  
11 by the CDC. In addition, Respondent prescribed opioids (Endocet and morphine sulfate) in  
12 combination with a benzodiazepine (diazepam) and a muscle relaxant (Soma), which is a highly  
13 addictive and dangerous mix also called the "Holy Trinity."<sup>5</sup> Respondent prescribed similar  
14 drugs and dosages during his ongoing treatment of Patient D.

15 74. From on or about July 7, 2013, through October 10, 2013, Respondent saw Patient D  
16 approximately 3 times for pain management or "med refills." For the 2013 calendar year,  
17 Respondent wrote Patient D: 5 prescriptions for diazepam 5 mg for a total of 450 tablets; 4  
18 prescriptions for carisoprodol 350 mg for a total of 480 tablets; 3 prescriptions for oxycodone hcl-  
19 acetaminophen 325 mg – 5 mg for a total of 450 tablets; 2 prescriptions for morphine sulfate 100  
20 mg for a total of 180 tablets; and 1 prescription for 90 tablets of morphine sulfate 60 mg.

21 75. From on or about January 6, 2014, through October 20, 2014, Respondent saw Patient  
22 D approximately 6 times for pain management or "med refills." For the 2014 calendar year,  
23 Respondent wrote Patient D: 5 prescriptions for diazepam 5 mg for a total of 426 tablets; 4  
24 prescriptions for morphine sulfate 100 mg for a total of 360 tablets; 4 prescriptions for oxycodone  
25

26  
27 <sup>5</sup> Indeed, in or around July 2018, the local Sheriff's Department brought Patient D to the  
28 emergency room "for very irregular behavior"—running around in her front yard naked—and the  
attending physician wrote: "I wonder if her combination of Soma, benzodiazepines, and morphine  
may have possibly resulted in her altered mental status yesterday as well."

1 hcl-acetaminophen 325 mg – 5 mg for a total of 480 tablets; 4 prescriptions for eszopiclone 3 mg  
2 for a total of 120 tablets; and 1 prescription for 30 tablets of oxycodone hcl 10 mg.

3 76. From on or about October 8, 2015, through November 9, 2015, Respondent saw  
4 Patient D approximately 2 times for pain management or “med refills.” For the 2015 calendar  
5 year, Respondent wrote Patient D: 3 prescriptions for diazepam 5 mg for a total of 180 tablets; 3  
6 prescriptions for morphine sulfate 60 mg for a total of 270 tablets; 3 prescriptions for oxycodone  
7 hcl-acetaminophen 325 mg – 5 mg for a total of 240 tablets; and 3 prescriptions for eszopiclone 2  
8 mg for a total of 90 tablets.

9 77. From on or about January 7, 2016, through December 14, 2016, Respondent saw  
10 Patient D approximately 7 times for pain management or “med refills.” For the 2016 calendar  
11 year, Respondent wrote Patient D: 13 prescriptions for morphine sulfate 60 mg for a total of  
12 1,170 tablets; 13 prescriptions for oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of  
13 1,170 tablets; 9 prescriptions for diazepam 5 mg for a total of 540 tablets; and 6 prescriptions for  
14 eszopiclone 2 mg for a total of 180 tablets.

15 78. From on or about February 27, 2017, through October 25, 2017, Respondent saw  
16 Patient D approximately 4 times for pain management or “med refills.” For the 2017 calendar  
17 year, Respondent wrote Patient D: 12 prescriptions for morphine sulfate 60 mg for a total of  
18 1,080 tablets; 12 prescriptions for oxycodone hcl-acetaminophen 325 mg – 5 mg for a total of  
19 1,080 tablets; 12 prescriptions for diazepam 5 mg for a total of 705 tablets; 10 prescriptions for  
20 carisoprodol 350 mg for a total of 900 tablets; and 1 prescription for 45 tablets of hydrocodone  
21 bitartrate-acetaminophen 325 mg – 10 mg.

22 79. From on or about January 24, 2018, through July 9, 2018, Respondent saw Patient D  
23 approximately 4 times for pain management or “med refills.” For the first 5 months of the 2018  
24 calendar year, Respondent wrote Patient D: 5 prescriptions for morphine sulfate 60 mg for a total  
25 of 450 tablets; 5 prescriptions for diazepam 5 mg for a total of 225 tablets; 5 prescriptions for  
26 carisoprodol 350 mg for a total of 450 tablets; 4 prescriptions for oxycodone hcl-acetaminophen  
27 325 mg – 5 mg for a total of 360 tablets; and 2 prescriptions for oxycodone hcl-acetaminophen  
28 325 mg – 7.5 mg for a total of 360 tablets.

1 treatment of Patients A, B, C, and D, as more particularly alleged in paragraphs 24 through 84,  
2 above, which are hereby incorporated by reference and realleged as if fully set forth herein.

3 **THIRD CAUSE FOR DISCIPLINE**

4 **(General Unprofessional Conduct)**

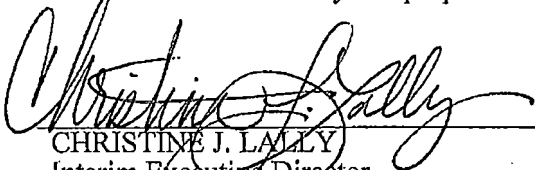

5 86. Respondent is further subject to disciplinary action under Code sections 2227 and  
6 2234, in that he has engaged in conduct which breaches the rules or ethical code of the medical  
7 profession, or conduct which is unbecoming a member in good standing of the medical  
8 profession, and which demonstrates an unfitness to practice medicine, as more particularly  
9 alleged in paragraphs 24 through 85, above, which are hereby incorporated by reference and  
10 realleged as if fully set forth herein.

11 **PRAYER**

12 WHEREFORE, Complainant requests that a hearing be held on the matters herein alleged,  
13 and that following the hearing, the Medical Board of California issue a decision:

- 14 1. Revoking or suspending Physician's and Surgeon's Certificate No. G 15724, issued  
15 to Lawrence A. Price, M.D.;
- 16 2. Revoking, suspending or denying approval of Lawrence A. Price, M.D.'s authority to  
17 supervise physician assistants and advanced practice nurses;
- 18 3. Ordering Lawrence A. Price, M.D., if placed on probation, to pay the Board the costs  
19 of probation monitoring; and
- 20 4. Taking such other and further action as deemed necessary and proper.

21  
22 DATED: APR 21 2020

  
23 CHRISTINE J. LALLY  
24 Interim Executive Director  
25 Medical Board of California  
26 Department of Consumer Affairs  
27 State of California  
28 *Complainant*
