4 schedule for two weeks, antibiotics and anesthetic.

5 11. Approximately three years later, on September 7, 2007, Patient A transferred his
6 primary care to Respondent.

7 12. On September 7, 2007, Respondent documented Hodgkin's lymphoma in remission
8 and stable seizure disorder. Patient A's medications were not documented.

9 13. Patient A presented on February 15, 2008, for complaints of palpitations and leaning
10 to one side. No neurologic exam was documented. Respondent's assessment was, "Lymphoma
11 in remission, seizure disorder, controlled on Topamax, multiple complaints, possible side effects
12 of Topamax."

13 14. Patient A presented to Respondent's office on May 23, 2008, for constipation.
14 Respondent's assessment was mild constipation, lymphoma in remission for three years and
15 seizure, stable on Topamax nightly. His management plan included Metamucil, high fiber diet,
16 follow up with oncology and continuation of Topamax nightly.

17 15. Patient A presented to Riverside Community Hospital on May 31, 2012, after a
18 mechanical fall. No loss of consciousness or seizure was documented. The prehospital report
19 states that Patient A, "seemed a little out of it," when his supervisor found him in the stairwell.
20 He was found to have a minor closed head injury, abrasions to the scalp and right forearm, and a
21 non-displaced right radial head fracture. Patient A was discharged home with a prescription for
22 Naproxen, oral narcotics and instructions to follow-up with his primary care physician.

27 ray. Topamax 100 mg twice a day was prescribed. There was no documentation regarding any
28 change in the Topamax dosing. Drug levels were ordered.

1 17. Patient A was admitted to Riverside Community Hospital on November 15, 2012,
2 with a witnessed seizure. His prehospital care report indicated altered level of consciousness
3 witnessed by a co-worker. His last seizure was documented as occurring one year prior. No
4 neurologic abnormalities were identified on physical examination. His medication was listed as
5 Topamax 100 mg daily. Laboratory tests were remarkable for low platelets. Patient A's head CT
6 was normal. The documented clinical impression was possible seizure. Patient A was discharged
7 home in stable condition with recommendations to follow-up with Respondent and a neurologist.
8 Information regarding recurrent seizures was given to Patient A.

9 18. Patient A again presented to Respondent's office on November 19, 2012, for a

27 status post motor vehicle accident, possible seizure, side effect of Topamax. Respondent's
28 management plan included laboratory studies, referrals to psychiatry and neurology with possible

1 further diagnostic studies including MRI and EEG. Respondent prescribed Topamax 100 mg
2 twice a day.

3 21. Respondent was repeatedly negligent as follows: (1) Respondent failed to
4 appropriately manage the patient's seizure disorder; (2) Respondent did not monitor the
5 effectiveness of the prescribed anti-seizure treatment or completely assess its adverse effects; and
6 (3) Respondent failed to report Patient A's lapse of consciousness/file a Confidential Morbidity
